

M3t EMV Cloud Kernel

EMVCO & UL Level II & III Certified

Connect Your Payment and Financial Service Devices Today to Conduct EMV Chip Based Credit and Debit Card Transactions

M3t LC1711 Kiosk Shown Above

M3t EMV Cloud Kernel

The M3t Level II & III Certified EMV Kernel lives in the Microsoft Azure Cloud and is designed to streamline and rapidly improve the time to market for your cash access and payment solutions.

- Connect your unattended kiosk and attended point-of-sale solutions to the Microsoft Azure cloud for a simple method to conduct EMV transactions.
- By leveraging the cloud for this process, you are no longer dependent on a specific operating system on your terminals.
- Certified by EMVCO and UL, January 2018, as the first cloud-based solution in the United States.
- M3t expert software resources will walk you through the process of integrating hardware components and full certification.
- The kernel is currently certified and in use with processors such as WorldPay, Columbus Data and Switch Commerce on over 3.000 terminals in the U.S.
- We offer a configuration in which the M3t EMV Cloud Kernel resides on the terminal itself if desired.
